

Eric Baker Estill County Extension Agent for Agriculture & Natural Resources

According to University of Kentucky Extension Veterinarian Dr. Michelle Arnold, beef producers with spring calving herds should begin feeding mineral with magnesium now. Grass tetany is a disorder caused by an abnormally low amount of magnesium in the blood of cattle and sheep. Grass tetany occurs most often in animals grazing lush spring forages-- especially small grains and coolseason grasses.

Grass tetany is most they are high producers and stagger. As the dis- in the mineral mixture;

Farmers Should Document Flood Related Damage

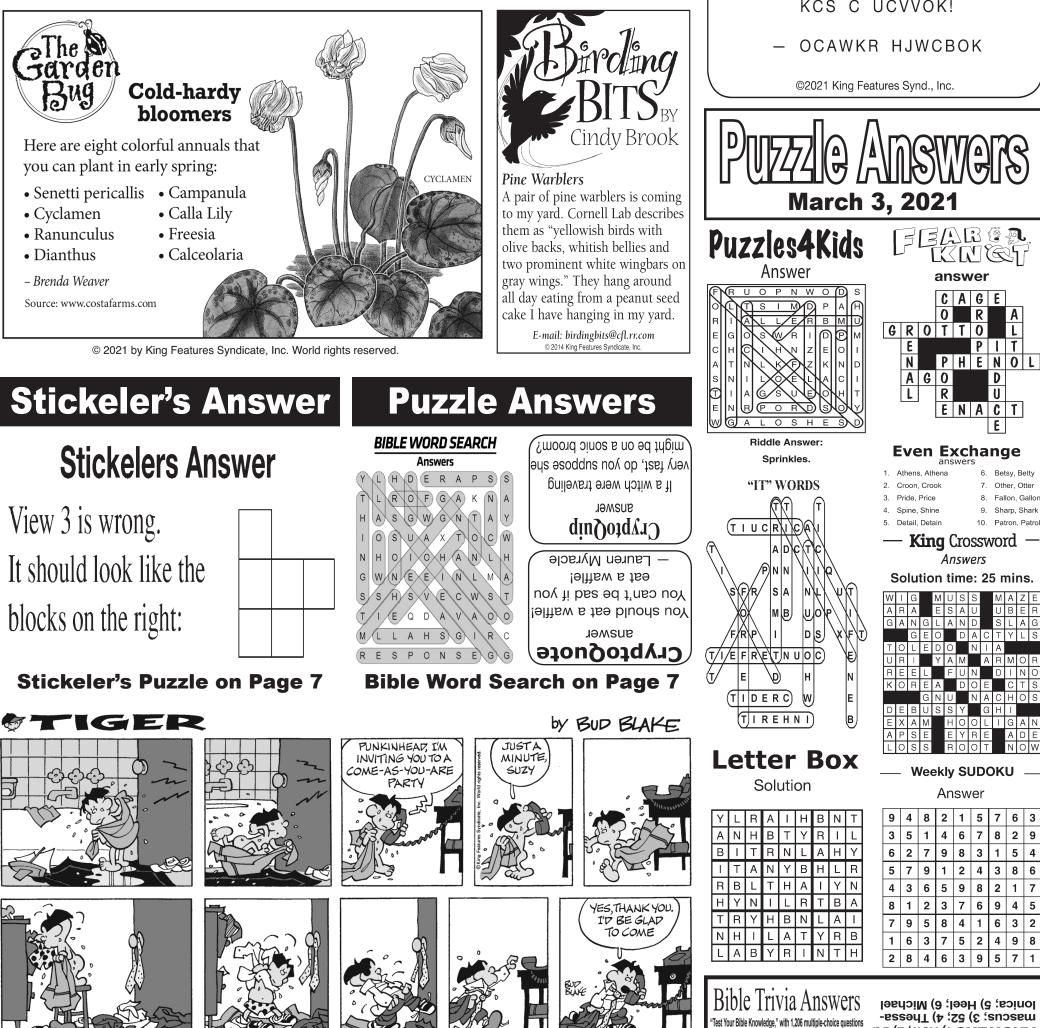

Estill County is in the midst of significant flooding this week. Our heart goes out to everyone who is affected by this disaster. Many farmers have flood damage and debris that will have to be removed from the fields.

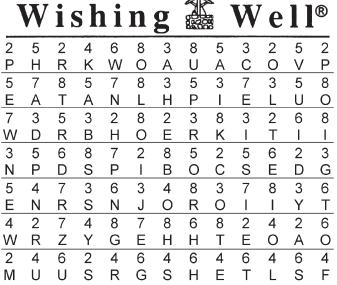

After previous discussions with USDA Farm Service Agency (FSA), it is suggested that farmers document damage with pictures, labor and repair receipts, third-party witness statement, and other records that can help prove the loss. If and when any

USDA assistance program is made available, proper documentation will be necessary.

One source of helpful information is the Extension Disaster Education Network website at https://extensiondisaster.net/

For questions on USDA disaster programs, farmers can contact the Madison County FSA at 859-624-1980. Above all, please be safe in dealing with any flooded areas and debris cleanup.

HERE IS A PLEASANT LITTLE GAME that will give you a message every day. It's a numerical puzzle designed to spell out your fortune. Count the letters in your first name. If the number of letters is 6 or more, subtract 4. If the number is less than 6, add 3. The result is your key number. Start at the upper left-hand corner and check one of your key numbers, left to right. Then read the message the letters under the checked figures give you.
